Professional Summary

Highly motivated final-year B.E. student specializing in Computer Science and Engineering (Cyber Security). Practical execution experience spanning project coordination, secure data environments, exploratory data analysis, and technical documentation. Proven capability in managing local infrastructure deployment, supporting frontend interface testing, and evaluating data workflows utilizing foundational cloud and AI platforms.

Technical Skills

- **Languages:** Python, SQL, JavaScript, HTML5, CSS3
- **Frameworks & Libraries:** Pandas, Matplotlib, Seaborn, NumPy
- **Tools & Ecosystems:** Git/GitHub, IBM Granite, Data Classification, Jupyter Notebooks
- **Core Competencies:** Data Inspection, Outlier Handling, Feature Preprocessing, Operational Testing, Security Protocols

Internship & Industry Experience

Data Science Intern

Ongoing (3-Month Engagement)

Gradwin OPC Private Limited — Data Science & Analytics Track

- Executing end-to-end data processing routines including automated data inspection, missing value handling, and outlier detection/removal strategies across raw datasets.
- Conducting exploratory data analysis (EDA) using NumPy, Pandas, Matplotlib, and Seaborn to extract feature correlations and generate visual summary reports.
- Performing dataset transformations, feature scaling, and train-test-split partitioning techniques to prepare structured data pipelines for analytical models.

Technical Development Intern

Industry Training

Pydun Innovative Technology — Core Engineering Engagement

- Coordinated technical infrastructure requirements and local development station setups to support high-compute data engineering simulation pipelines.
- Managed version control update tracking and generated structural project documentation to preserve baseline stability across multi-developer sprints.
- Assisted in running local diagnostic execution scripts to log runtime validation milestones and compile system performance reports.

Featured Engineering Projects

Predictive Diabetic Analytics Environment

Python, Infrastructure Management

- Managed the hardware hosting setup and technical asset deployment parameters for a multi-variable data processing risk assessment engine.
- Maintained error logs, checked file format compliance, and handled operational dataset inputs to support continuous testing phases.

Astranex Vault – Secure Certificate Platform

JavaScript, HTML5, CSS3, Layout Testing

- Coordinated the operational layout evaluation for a static web application engineered to distribute achievement credentials for university symposium events.
- Executed cross-device browser checks to ensure secure user navigation flows and layout continuity across active student queries.

Institutional Secure Voting Portal

Web Stack, Operations Coordination

- Supported project lifecycle requirements for an interactive web-based campus election validation tracking platform.
- Managed system configuration checklists and documented backend entry pathways to ensure clean data flow structures.

Education

B.E. in Computer Science and Engineering (Cyber Security)

Expected Graduation: 2027

SRG Engineering College (Anna University), Namakkal, India

CGPA: 7.90

- Currently pursuing Final Year Core Engineering Specializations.

Certifications & Industry Credentials

- **IBM Professional Credential:** Data Classification and Summarization Using IBM Granite – Issued by IBM SkillsBuild (Feb 2026).
- **Cyber Security Training:** Cyber Security and Ethical Hacking Internship Program Engagement – Veranda Enterprise.
- **Technical Competencies:** Foundational tracking focus regarding secure network configurations, data verification rules, and system logging protocols.
